Project 2, Task 1

Done by: Fatima Abdalla

What are the sub-industries in the consumer staples sector with the highest and the lowest total revenue in year 1?

This chart shows the total revenue of the staple consumer sector 12 sub-industries in year 1. Hypermarkets & supercenters have the maximum total revenue (\$574 billion) meanwhile Distillers & Vintners have the lowest total revenue with \$2.8 billion.

The mean is about \$116 billion and it's higher than the median (\$98 billion) meaning that this distribution is positively or right-skewed. however, the standard deviation value is higher (\$153 billion) making total revenue values spread out from the average and more variable with 50% of sub-industries' total revenue higher than \$98 billion. The range is about \$571 billion which is closer to the max value, meaning there is a huge gap between the max and min sub-industries total revenues.

Thank You!
